

Invitation to the third high-level workshop on 5G authorisation processes

Dear Sir / Madam,

5G is being rolled out in the Member States. The current crisis exemplifies the importance of a fast and efficient roll-out of very high-quality networks. But the current situation also causes some difficulties with regard to the roll-out of 5G networks.

There have already been two successful workshops held on 5G authorisation processes, where BEREC and the RSPG participated. We would like to continue this format with particular regard to the current challenges for the 5G roll-out.

National experts will have the opportunity to discuss challenges for awarding 5G spectrum as well as for deploying 5G infrastructure. They are encouraged to exchange views on possible solutions. For further detail please see the attached agenda.

Since the European Commission, the Member States, BEREC and the RSPG all have an important role to play in the relevant processes, we have sent this invitation to DG Connect, the competent ministries, the national regulatory authorities and the nominated RSPG members of the Member States.

We would be grateful if you could [confirm your participation by registering no later than June 12th](#).

Given the administrative limitations applicable to web-meetings, it would be ideal if each Member State as well as the European Commission could name a maximum of three nominated speakers.

We would like to stress the importance of this issue for BEREC and RSPG, as well as our sincere hope that you will therefore be able to attend. We aim to achieve a good representation from all Member States, in what we believe will be an important discussion.

Yours sincerely,

Frank Krüger
RSPG Chair

Dan Sjöblom
BEREC Chair
