

Antenna Bureau

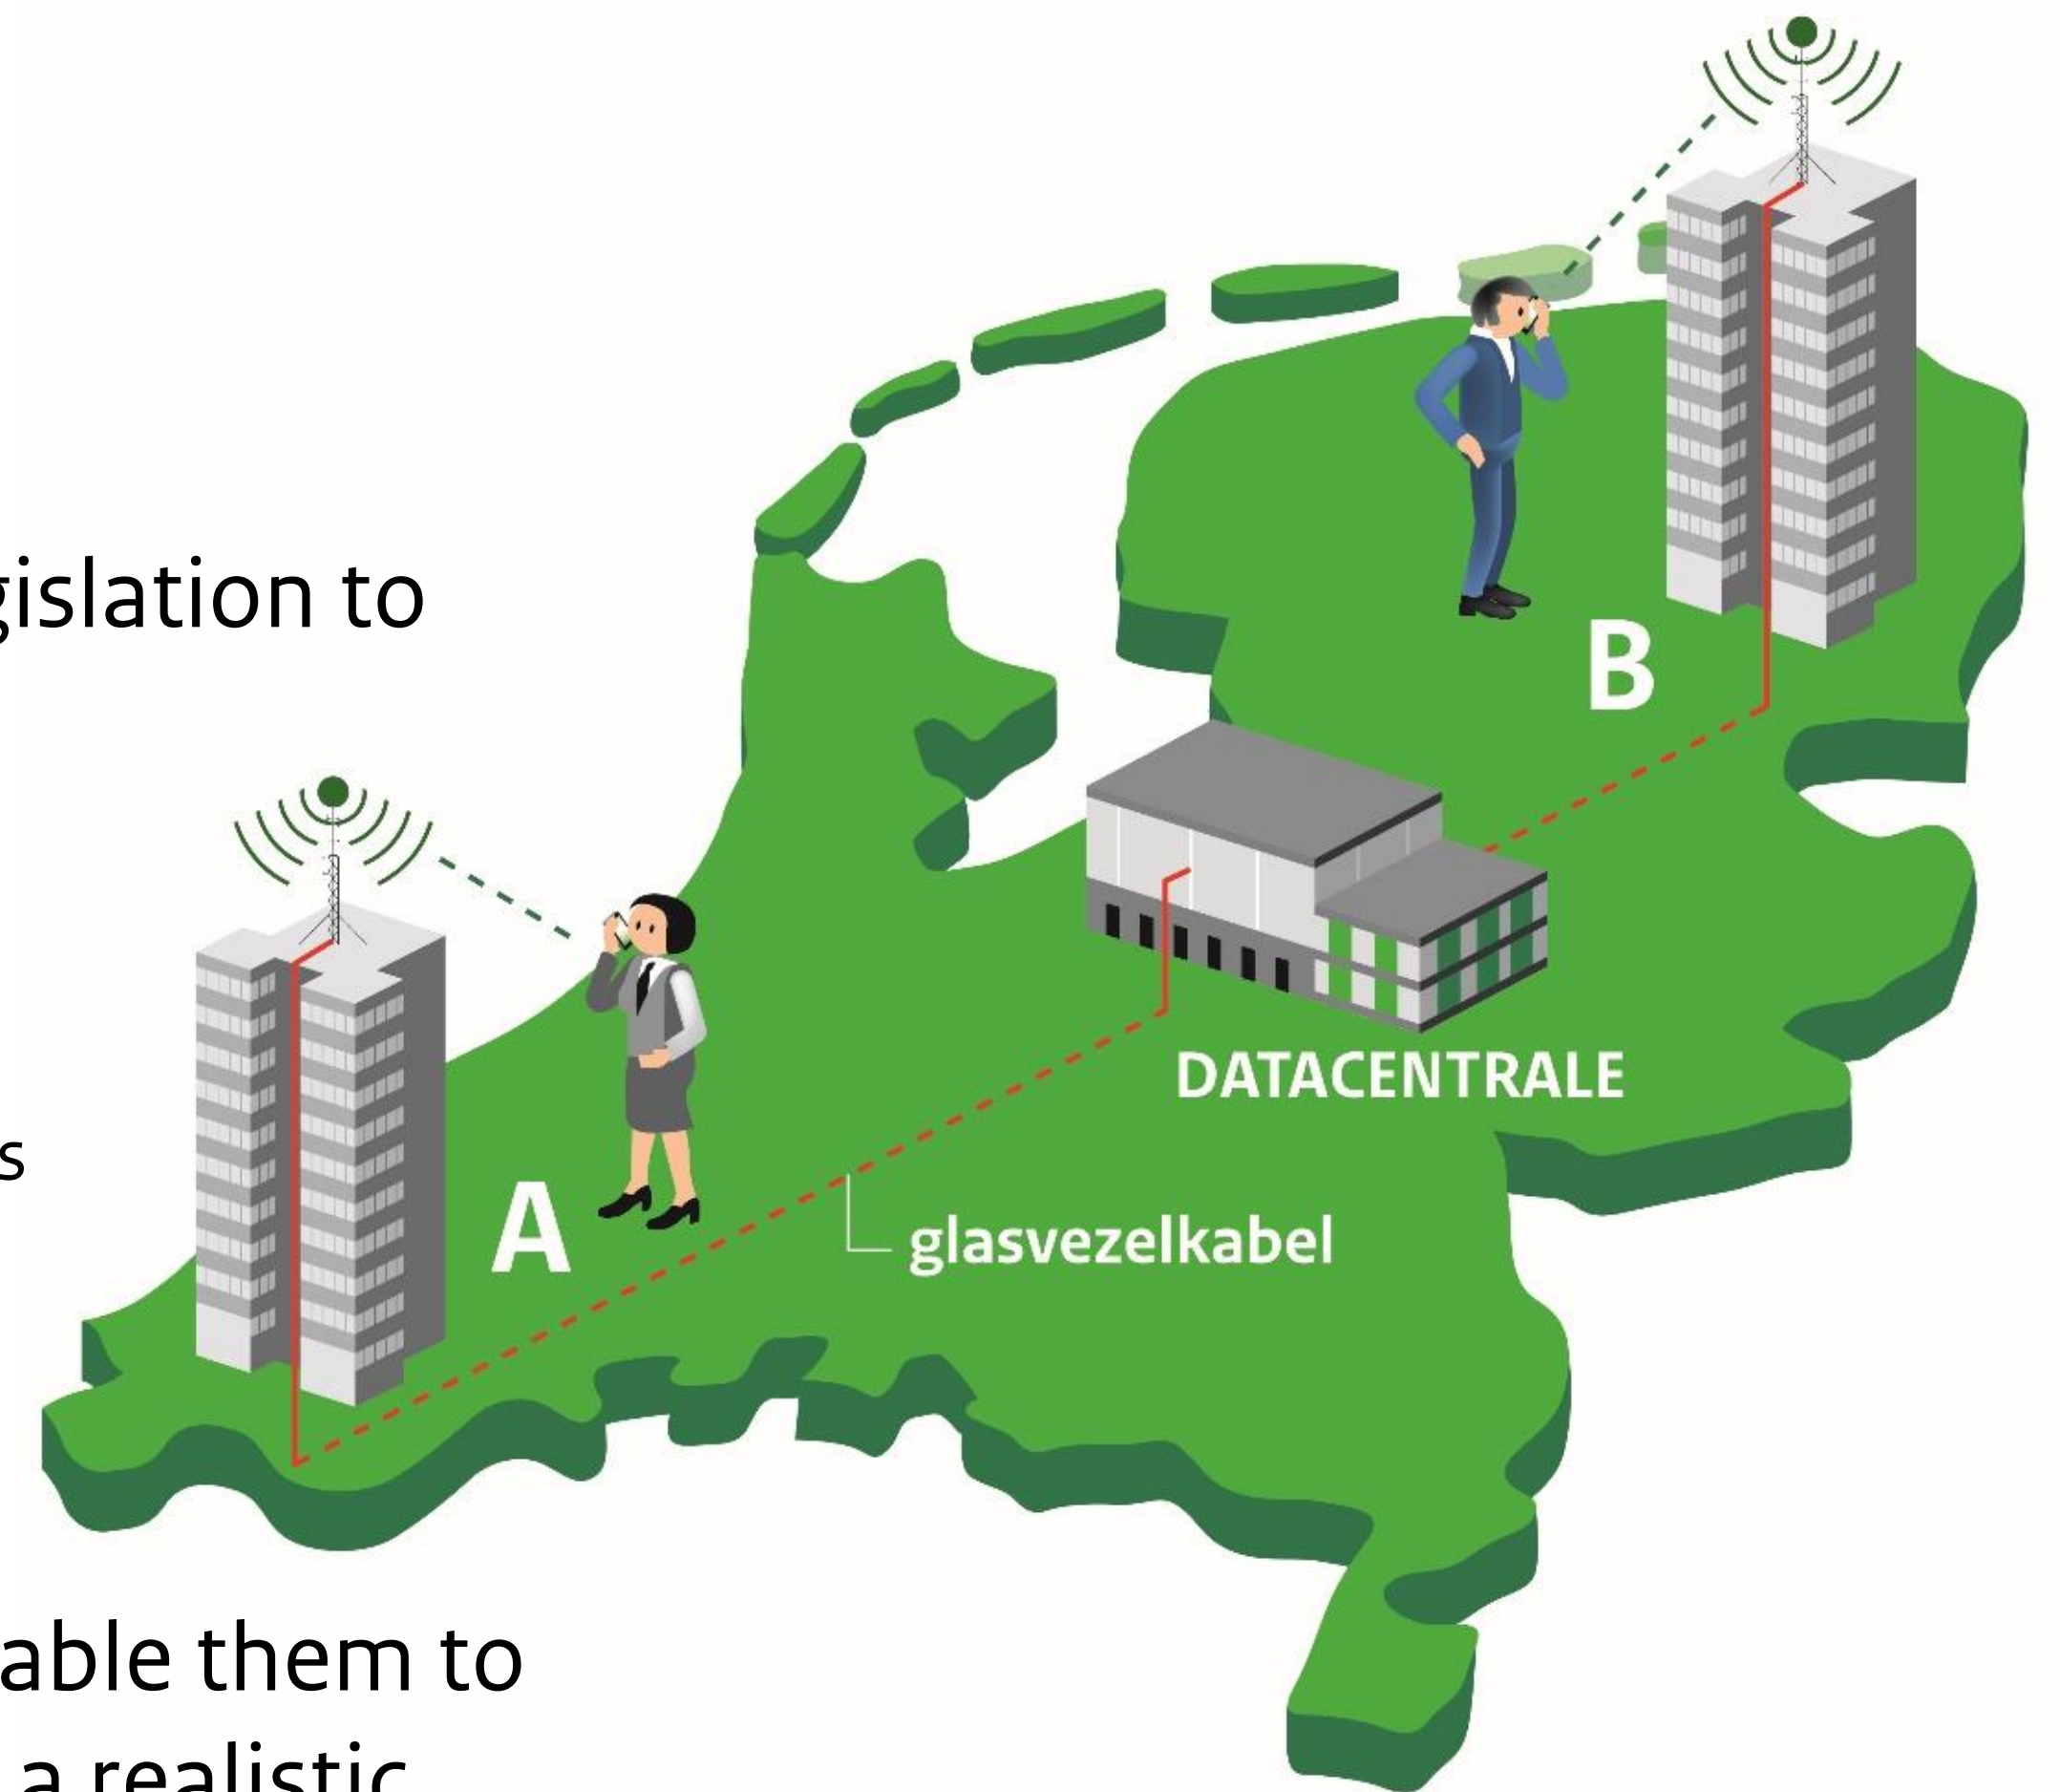

Lisette Kruit
Advisor

21 september 2021

The Antenna Bureau

- Information office of national government, part of Radiocommunications Agency Netherlands
- Provides information about technology, EMF and legislation to citizens, local government and professionals
 - Website
 - Antenna register (website)
 - Informing the public on location
 - Available for questions from citizens by e-mail, phone and socials
 - Several courses for professionals
 - Collaboration with other organizations, including the Knowledge Platform on EMF and Health
- Goal: providing factual information for citizens to enable them to form an opinion about antennas and contributing to a realistic image of EMF in the environment

EMF, limits and communication

- ICNIRP 2020
- EMF limits on website
- EMF measurements in Antenna register
 - Measurements based on legal task
 - Measurements for informing the public, on sample basis and after questions from the public
 - Measurements based on sample

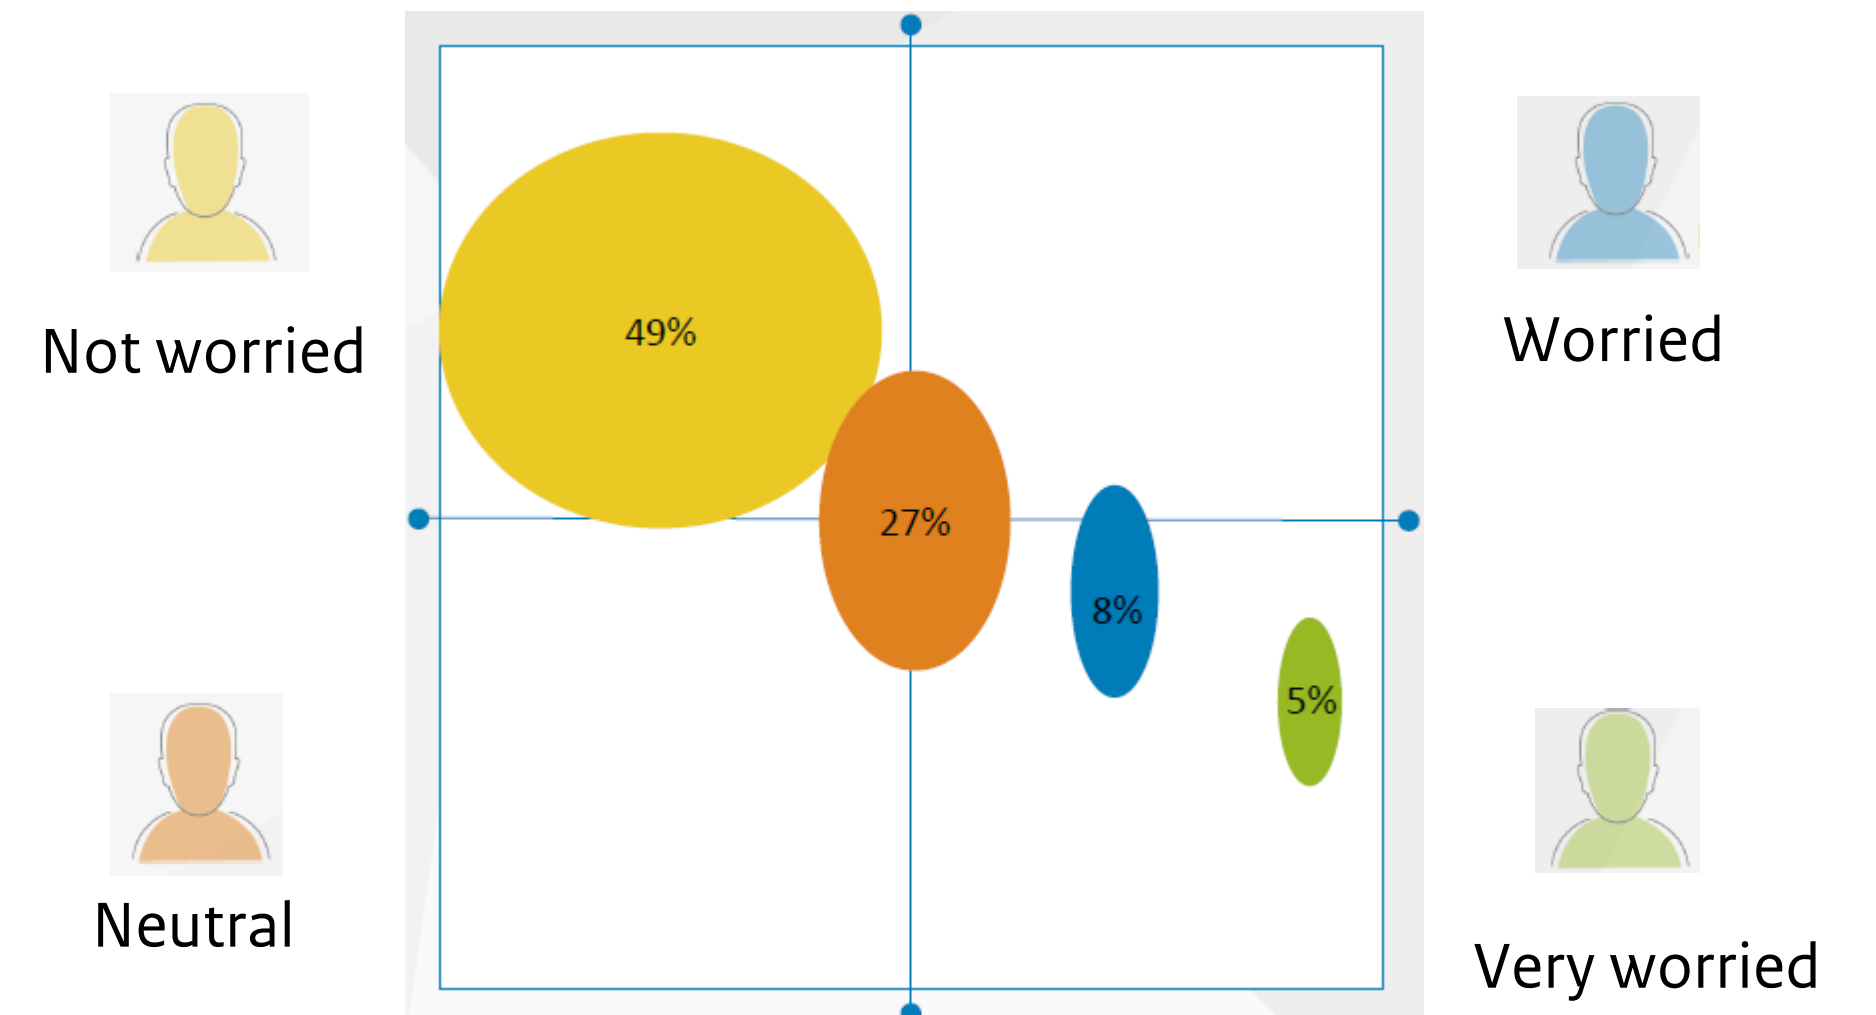

Our communication strategy

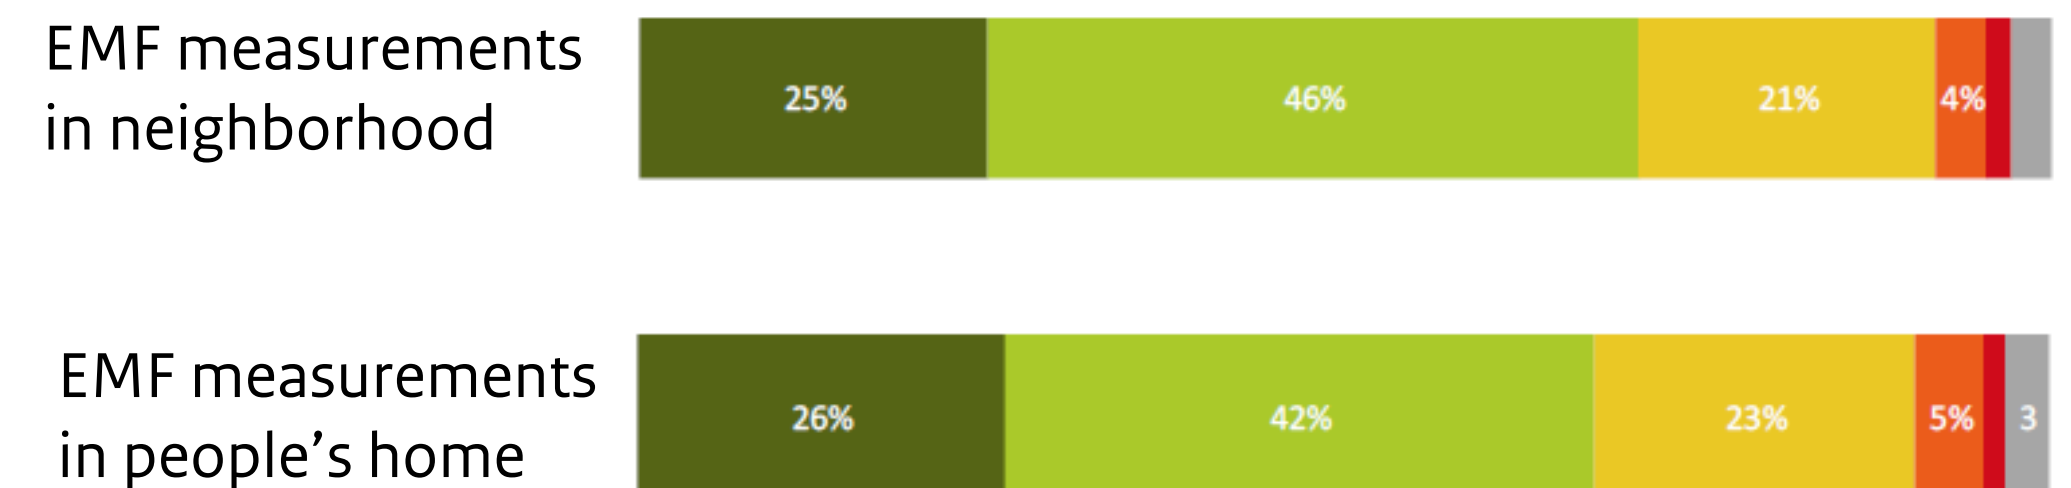

- Mostly reactive communication strategy
 - Information available (eg website, factsheets etc)
 - Information sessions on location are organized on demand
 - Active information to local government

- Input from society:
 - Question from citizens
 - Informing the public on location
 - (International) field research
 - News
 - Social media
 - Regulatory developments

Research: Most Dutch citizens not worried about EMF

Research: Dutch citizens would like information about the EMF in their surroundings

Products
