---

Dear Sir and Madam,

On behalf of the BMVI we have the following comments on the Draft BEREC guidelines on geographical surveys

23. When some data on the broadband coverage or characteristics on the terrain is made public by the Authority and some interaction with the public is allowed, information from third parties may enable the Authority to suspect that some particular data is inaccurate.

--> Delete both "some" and change the word "allowed" into "most welcome"

79.

--> The BMVI is propose that BEREC should define common signal strength limits and a test scenario for all available mobile technologies (2G, 3G,4G, 5G) to ensure the comparability of the data in the European Union.

89.

--> The BMVI prose that NRAs should foster the development of tools (software or hardware) to perform measurements.

Please do not hesitate to contact me for further information or questions.

With best regards,

Andreas Johann
