

BEREC study on the evolution of the competition dynamics of tower and access infrastructure companies not directly providing retail services

BEREC Office has launched an ex-ante advertisement for a negotiated procedure with at least five candidates for the maximum value of EUR 100 000 for the provision of ‘BEREC study on the evolution of the competition dynamics of tower and access infrastructure companies not directly providing retail services’.

The objective of this contract is to procure a study that will provide BEREC with an appropriate snapshot of the main divestitures/spin-offs of key network elements able to sustain the roll-out of networks which are reconfiguring the electronic communications sector in terms of competition and retail dynamics, as well as their implications for the regulatory and policy decisions within the sector. The study will also provide insights into the business models associated with the management, commercialization and use of physical infrastructure assets. Geographically, the focus will be on the developments in Europe, but cases in the USA, Japan Korea and Australia are of interest as well. Organizations responding to the tender must have experience and knowledge of the electronic communications sector regulation, as well as a good understanding of the functioning of the telecommunications markets in a wider sense.

The ex-ante advertisement is available at the following link:
