Subject: Suggested addition for connectivity challenges

Hello BEREC,

I saw the request for consultation on the virtual worlds report draft.

Table 5 of BoR (26) 39 describes future ECN developments required for VW/Web4.

Given that latency and connectivity are paramount, why does this table not mention IPv6?

It is well known that IPv6 reduces latency and is required for solving the address shortages.

Given these facts, i would advise that the IPv6 aspect is to be integrated into the document.

Sincerely,

Dodo Bird
